NOVEMBER 23, 2013

Interview with Engr (Dr) Ayao Tsuge, President Japan Federation of Engineering Society

Engr. Dr. Ayao Tsuge, is the President of Japan Federation of Engineering Society and President of Japan International Science and Technology Exchange Center. He is also a member of the Science Council of Japan and Vice President of the Engineering Academy of Japan.

Engr. (Dr) Ayao Tsuge

E-Newsletter: *What are the present challenges engineering is facing in Japan*

Dr. Tsuge: As you know, engineering has the mission to contribute to the society. It is the internal mission of engineering to contribute to the society but after the earthquake of Tohoku in Japan, as you may know, it was a huge earthquake than we expected, we are now expanding our views in terms of engineering mission to the society in addition to the Design Science which is the original mission of engineering. We are now expanding our view point of Engi-

neering for Social Science in addition to the design science. So this is a new challenge.

E-Newsletter: *What is your message for the upcoming engineers?*

Dr. Tsuge: I always encourage the younger generation who are interested in engineering. Before we started engineering basics like myself as a mechanical engineer, we started with four dynamics. That is the bases of engineering. I always recommend and encourage the younger generation to see the society and to see the real world then they will be sure to find what they can contribute to the society and the world based on basic knowledge of engineering. That is my encouragement to the younger generation. They should look at the world and they should look at the society then they will find their mission.

E-Newsletter: *Thank you sir.*
